

CORRIGENDA

Volume 98, July 1981

In the paper by MCGUIRE and DVORAK (*Genetics* **98**: 589–596) entitled “Relationship between the number of homoeologues, chiasma frequency and the frequency of telosome pairing in wheat,” errors in deriving probabilities of chromosome configurations resulted in errors in the coefficients listed in the Tables. The authors thank G. KIMBER (University of Missouri at Columbia) and L. C. ALONSO (Koipesol S.A., Sevilla, Spain) for pointing out these errors. Corrected versions of the Tables and the Figure can be obtained from either JAN DVOŘÁK or PATRICK E. MCGUIRE, Department of Agronomy and Range Science, University of California, CA 95616.

Volume 99, September 1981

In the paper by CLARK (*Genetics* **99**: 157–168) entitled “Estimation of linkage in the presence of multiplicative viability effects,” the author’s address was incorrectly reported. The work was performed while the author was employed in the laboratory of Dr. WINIFRED DOANE at the Department of Zoology, Arizona State University, Tempe, AZ 85287. The author’s current address is: Institute of Ecology and Genetics, University of Aarhus, DK-800, Aarhus-C, Denmark.
