CORRIGENDUM

In the paper by L. D. Gottlieb and R. C. Higgins (GENETICS 107: 131–140; May, 1984) entitled “Phosphoglucone isomerase expression in species of Clarkia with and without a duplication of the coding gene,” the authors regret the following error:

The equation on p. 133 should read

\[
% \text{ Cytosolic PGI} = \frac{100 \times \left[ \text{Activity in extract before incubation} - \left( \text{Endogenous activity in antiserum} - \text{Activity in extract after incubation} \right) \right]}{\text{Activity in extract before incubation}}
\]

The results reported in the paper were calculated using the correct formula.
