CORRIGENDA

In the paper by E. B. O'Hara and W. E. Timberlake (Genetics 121: 249–254; February, 1989) entitled "Molecular characterization of the Aspergillus nidulans yA locus," it was shown in Figure 4 and stated in the text that yA is transcribed from right to left. Based on more recent information, the authors wish to report that the direction is from left to right.

In the paper by B. G. Hall, P. W. Betts and J. C. Wooton (Genetics 123: 635–648; December, 1989) entitled "DNA sequence analysis of artificially evolved ebg enzyme and edg repressor genes," the authors wish to correct errors in Table 3. For strains 5A2, A27, SJ60 and A272 the substitution at bp 4223 in the ebgA gene was given as G → A but should have been G → T.
