PERSPECTIVES

Barbash, Daniel A., Ninety years of *Drosophila melanogaster* hybrids ........................................... 1—8

REVIEW

Charlesworth, Deborah, and Judith E. Mank, The birds and the bees and the flowers and the trees: Lessons from genetic mapping of sex determination in plants and animals ........................................... 9—31

GENETICS EDUCATION

Healy, Frank G., and Kevin D. Livingstone, Using student-generated UV-induced *Escherichia coli* mutants in a directed inquiry undergraduate genetics laboratory ................................................................. 35—39

COMMENTARY

Cutler, David J., and Jeffrey D. Jensen, To pool, or not to pool? .............................................. 41—43

INVESTIGATIONS

Genome integrity and transmission

Hayashi, Michiko, Susanna Mlynarczyk-Evans and Anne M. Villeneuve, The synaptonemal complex shapes the crossover landscape through cooperative assembly, crossover promotion and crossover inhibition during *Caenorhabditis elegans* meiosis ................................................................. 45—58

Momose, Masaki, Yutaka Abe and Yoshihiro Ozeki, Miniature inverted-repeat transposable elements of *Stowaway* are active in potato ................................................................. 59—66

Dhillon, Brahim, Jessica R. Cavaletto, Karl V. Wood and Stephen B. Goodwin, Accidental amplification and inactivation of a methyltransferase gene eliminates cytosine methylation in *Mycosphaerella graminicola* ................................................................. 67—77

Gene expression

Miller, Carson J., and John R. Carlson, Regulation of odor receptor genes in trichoid sensilla of the *Drosophila* antenna ................................................................. 79—95

Bougas, Berénice, Sarah Granier, Céline Audet and Louis Bernatchez, The transcriptional landscape of cross-specific hybrids and its possible link with growth in hybrid brook char (*Salvelinus fontinalis* Mitchill) ................................................................. 97—107

Jiang, Pan-Pan, Daniel L. Hartl and Bernardo Lemos, *Y* not a dead end: Epistatic interactions between *Y*-linked regulatory polymorphisms and genetic background affect global gene expression in *Drosophila melanogaster* ................................................................. 109—118

Lee, Dong Whan, Ryan Millimaki and Rodolfo Aramayo, QIP, a component of the vegetative RNA silencing pathway, is essential for meiosis and suppresses meiotic silencing in *Neurospora crassa* ........... 127—133

Cellular genetics

Trujillo, Gloriana, Katsunori Nakata, Dong Yan, Ich N. Maruyama and Yishi Jin, A ubiquitin E2 variant protein acts in axon termination and synaptogenesis in *Caenorhabditis elegans* ........................................ 135—145

Verdoni, Angela M., Keaton J. Schuster, Brian S. Cole, Akihiro Ikeda, Winston W. Kao and Sake Ikeda, A pathogenic relationship between a regulator of the actin cytoskeleton and serum response factor ................................................................. 147—157

Developmental and behavioral genetics

Morton, David B., Rachel Clemens-Grisham, Dennis J. Hazelett and Anke Vermeiren-Schmaedick, Infertility and male mating behavior deficits associated with Pde1c in *Drosophila melanogaster* ................................................................. 159—165
Population and evolutionary genetics

Futschik, Andreas, and Christian Schlötterer, The next generation of molecular markers from massively parallel sequencing of pooled DNA samples .................................................. 207—218

Yukilevich, Roman, Thomas L. Turner, Fumio Aoki, Sergey V. Nuzhdin and John R. True, Patterns and processes of genome-wide divergence between North American and African Drosophila melanogaster .............................................................................. 219—239

Bonhomme, Maxime, Claude Chevalet, Bertrand Servin, Simon Boitard, Jihad Abdallah, Sarah Blott and Magali SanCristobal, Detecting selection in population trees: The Lewontin and Krakauer test extended .............................................................. 241—262

Rosloski, Sarah Marie, Sathya Sheela Jali, SureshKumar Balasubramanian, Detlef Weigel and Vojislava Grbic, Natural diversity in flowering responses of Arabidopsis thaliana caused by variation in a tandem gene array ........................................................................................................ 263—276

Connallon, Tim, and Andrew G. Clark, Gene duplication, gene conversion and the evolution of the Y chromosome .................................................................................................................. 277—286

Xue, Cheng, Ren Huang, Taylor J. Maxwell and Yun-Xin Fu, Genome changes after gene duplication: Haploidy vs. diploidy ........................................................................................................ 287—294

Albrechtsen, Anders, Ida Moltke and Rasmus Nielsen, Natural selection and the distribution of identity-by-descent in the human genome .............................................................................. 295—308

Engelstädter, Jan, The effective size of populations infected with cytoplasmic sex-ratio distorters .............................................................................................................................. 309—320

Paul, Joshua S., and Yun S. Song, A principled approach to deriving approximate conditional sampling distributions in population genetics models with recombination ........................................ 321—338

Oka, Ayako, Akihiro Mita, Yuki Takada, Haruhiko Koseki and Toshihiko Shiroishi, Reproductive isolation in hybrid mice due to spermatogenesis defects at three meiotic stages ........................................... 339—351

Ferretti, Luca, Miguel Perez-Enciso and Sebastian Ramos-Onsins, Optimal neutrality tests based on the frequency spectrum ........................................................................................................... 353—365

Burke, GaeLEN R., Heather J. McLaughlin, Jean-Christophe Simon and Nancy A. Moran, Dynamics of a recurrent Buchnera mutation that affects thermal tolerance of pea aphid hosts .............. 367—372

Genetics of complex traits

Guo, Baohong, David A. Sleper and William D. Beavis, Nested association mapping for identification of functional markers .................................................................................................................. 373—383

Zou, Fei, Hanwen Huang, SeungGeun Lee and Ina HoescHele, Nonparametric Bayesian variable selection with applications to multiple quantitative trait loci mapping with epistasis and gene—environment interaction .............................................................................. 385—394

Huang, Yung-Fen, Delphine Madur, Valérie Combes, Chin Long Ky, Denis Courbriche, Philippe Jamin, Sophie Jouanne, Fabrice Dumas, Ellen Bouty, Pascal Bertin, Alain Charcosset and Laurence Moreau, The genetic architecture of grain yield and related traits in Zea m. L. revealed by comparing intermated and conventional populations ........................................................................................................... 395—404
