Confocal microscope image of a *Drosophila* 7-day testis. Mature spermatozoa form through a process called sperm individualization, wherein an actin rich individualization complex (blue spikes) separates individual sperm (gold) from a 64-spermatid syncytium. Individualization complexes are labeled with phalloidin and sperm are labeled with an antibody to polyglycylated tubulin found in the sperm tails. Image courtesy of Tingting Duan. See Duan and Geyer pp. 757–772 in this issue.
