Vol. 210 No. 1 September 2018

Hyphae from model fungus *Sordaria macrospora* were observed by fluorescence microscopy. Cell walls were stained with Calcofluor White M2R and septa, characteristic for all filamentous ascomycetes, are clearly visible. In mutants, lacking the conserved Hippo pathway-related germinal center kinase, these septa are either completely absent or show an irregular pattern. See Radchenko *et al.* pp. 137–153. Image courtesy of Daria Radchenko.

THE 2018 GSA HONORS AND AWARDS

- 1–2 **BioEYES: 2018 Elizabeth W. Jones Award for Excellence in Education**
Haloupek, Nicole

PERSPECTIVES

- 3–13 **Muller “Elements” in *Drosophila*: How the Search for the Genetic Basis for Speciation Led to the Birth of Comparative Genomics**
