Figure S8  Correlation coefficient as a function of mean expression for clustered and non-clustered gene arrangements. (A-H) Each panel shows the correlation coefficient for a different gene arrangement. Data symbols indicate the gene arrangements shown in Figures 1A and 3A. In addition we include non-clustered genes without terminators (maroon symbols, panel B). All cells are included in the analysis. Error bars indicate the s.e.m. (number of replicates is stated in the legends of Figures 1A and 3A).
