

Figure S8 Restoration of virulence factor expression to wild-type levels upon the re-introduction of *PUT2* into the *put2Δ* mutant. (A) Tenfold spot dilution assays on YPD medium demonstrated that the complemented *put2Δ + PUT2* strain exhibited wild-type growth at both 30 and 37°C. (B) Tenfold spot dilution assays on L-DOPA medium showed that the *put2Δ + PUT2* strain produced equal amount of melanin as the wild-type strain at both 30 and 37°C.
