**Figure S7** Schematic representation of the 2A-modified fosmid WRM0622aC02 encompassing the *ceh-6* genomic locus and the expression it drives in rectal cells (shown are the B, P12.p, U, F and K rectal cells) and that mimics the expression pattern observed after antibody staining for CEH-6 (Burglin and Ruvkun 2001). Anterior is to the left and ventral to the bottom.
