Figure S1  The mitotic arrest of ndc80-121 cells is dependent on Ipl1 activity and the spindle checkpoint. Budding indices for (A) wild-type, (B) ndc80-121, (C) ipl1-321, and (D) ndc80-121 ipl1-321 cells after synchronization at G1 and release into 37°C medium. At 37°C, large-budded ndc80-121 cells exhibit broken spindles and fail to undergo anaphase (Figure 2A and B).
