Figure S6  eQTL effects for LYS2 local regulatory variant and downstream genes. The allele associated with lower LYS2 expression ("0") is associated with lower expression of known Lys14p targets LYS2, LYS1, LYS9, LYS20, and LYS21. The same allele also associates with higher expression of three non-LYS genes containing Lys14p binding motifs (DYS1, TOP2, DAD2), and the Lys14p motif-containing LYS12.
