Figure S9  Cell Cycle Analyses of Silenced and Drug Treated Cellular Populations.  
Flow cytometric analyses of DNA content profiles from asynchronously growing cells harvested from controls (Non-treated [NT] and DMSO-treated [DMSO]), protein silenced populations (siGAPDH, siRNF20 or siDOT1L) or drug treated populations (SGC0946). Percentage of cells within each stage (i.e. G0/G1, S-phase or G2/M) are presented in Table S7.
