Figure S3. Mitochondrial structural defects in sel-12 mutants are not caused by muscle structure abnormalities. (A) Representative images of body wall muscle myofilament organization (stEx30) in wild type and sel-12(ty11) animals. (B) Representative images of body wall muscle mitochondria in wild type and sel-12(ty11) animals visualized using a reporter strain that targets mCherry to the outer mitochondrial membrane (sysIs243). Scale bar represents 10 µm.
