**FIGURE S2.**—*mec-15* mutations do not affect axonal transport, general gene expression, or microtubule levels. Immunostaining against (A) MEC-2 in adult ALM neurons, (B) MEC-18 in adult ALM neurons, (C) MEC-7 in L4 ALM neurons, (D) acetylated α-tubulin in adult ALM neurons. Although staining intensity varied among animals, *mec-15* mutants were not discernibly different from wild type controls. Animals for these experiments were grown at 25°C; scale bars = 20 μm.
