Figure S4.—Copy number variation of SNC1 and At4g16950 in the bal variant. (A) and (B). Results of DNA gel blot analyses. Hybridization probes corresponding to exon 1 sequences of SNC1 and At4g16950 were used in (A) and (B), respectively. The sizes of the strongest bands match those expected from the restriction fragments of SNC1 and At4g16950. BAL: wild-type plant. bal: bal variant.
