FIGURE S6.—No decrease in \textit{SNC1} copy number was detected in three lines of stable \textit{bal} $\rightarrow$ \textit{BAL} suppressed lines. \( g_{SNC1}/g_{RPP4} \): the relative ratio of genomic copy number of \textit{SNC1} and \textit{RPP4} determined by quantitative real-time PCR. \textit{BAL}: wild type plant. \textit{bal}: \textit{bal} variant. Line f, Line s, and Line w: three suppressed lines.
