Figure S2.—Optimal flux surface and equilibrium reaction rates from 200 replicate simulations of the three-enzyme MCT model with $\alpha_i = 0.95$. Parameters as in Figure 2. Blue points: equilibria for which $C_i > C_2, C_3$. Red points: equilibria for which $C_2 > C_i, C_3$. Purple points: equilibria for which $C_3 > C_i, C_2$. Figures are same graph from different viewpoints.
