FIGURE S1.—Posterior distributions of parameters of (A) 4Neμ of macaque monkey populations on Borneo (θ_B), combined data from all Sulawesi species except M. brunnescens (θ_S), and the ancestor of these populations before divergence (θ_A) for models with and without migration. (B) divergence time (T) in generations for each model. (C) migration from Borneo to Sulawesi (m_{BS}) and from Sulawesi to Borneo (m_{SB}) in the model with asymmetric migration.
