FIGURE S3.—(A) Sha and Kas-1 DNA sequence downstream of the MAF2 coding region shows that MAF3 has been deleted in these two accessions. 2i and 3i, are sequences found downstream of the MAF2 or MAF3 loci in Col, respectively; *, refers to a region that cannot be definitively assigned to MAF2 or MAF3 because of the shared sequence identity. (B) MAF2-Kas-1 allele showing the location of the 466 bp deletion.
