FIGURE S1.—Schematic diagram depicting the positions of the proximal and distal markers for genotyping of B6-ChrX^{MSM} strain. The pseudoautosomal region starts in the middle of Mid1. Yellow and gray indicate the MSM-derived and B6-derived regions, respectively. In the B6-ChrX^{MSM} strain, the distal region beyond the marker X164174029 is derived from B6 strain, and the small region including marker X163466600 contains B6 genome in some individuals.
