

FIGURE S1.—*Phs-lin-56* transgenic animals express LIN-56 at least 10-fold higher than wild-type animals. Immunoblot of wild-type, *lin-56(n2728)*, or transgenic protein extracts probed with anti-LIN-56 antibodies. The arrow indicates the band that corresponds to LIN-56. Molecular weights of marker proteins are indicated at left in kilodaltons.
