Figure 53  Localized proliferation was not observed by EdU incorporation in proliferating cells. EdU (white) labels proliferating cells, anti-cleaved Caspase3 (aC3, magenta) marks dying cells. White lines mark the approximate A-P boundary as assessed by GFP. Posterior is to the right. Scale bar is 100μm. (A-A’) Discs dissected from ablated (A) and control (A’) animals 6 hr AUS. (B-B’) Discs dissected from ablated (B) and control (B’) animals 12 hr AUS.
