Figure S4  Accuracy of the inferred ancestral states on each inner node. Each dot represents 200 runs of simulations from the root state (1,1,1,1,0) in green, (1,1,0,1,0) in purple, (1,1,1,0,0) in blue and (1,0,0,0,0) in red. The accuracy is the percentage of correct states inferred out of the 200 runs. The left column varies the rates of all events, while the right column varies the rates of only the transpositions. Inner node labels follow the names defined in Figure S7.
