Figure S2  Abp1p expression is not cell cycle regulated. (A) Flow cytometry analysis of DNA content of wild type yeast cells synchronized by release from α–factor at the indicated times in the left. (B) Protein extracts were analyzed by Western blotting using polyclonal anti-Abp1p antibody to monitor Abp1p levels or anti-coronin antibody to control for cellular protein levels. Time is minutes after α–factor release. The positions of phosphorylated and unphosphorylated Abp1p are indicated.
