Figure S4  The probability density estimates for distribution of (A) CYR1 and (B) FLO11 expression values in simple (black) and complex segregants (red). Complex colony segregants have significantly higher expression of both CYR1 and FLO11 than simple colony segregants (Mann-Whitney p-values of $6.469 \times 10^{-7}$ and $4.1 \times 10^{-10}$ respectively). The rug plot at bottom indicates expression values for individual segregants.
