Figure S1  Distributions of ERC with Shu complex members PSY3 (A), SHU1 (B), and CSM2 (C). Violin plots show the median (dot) and upper and lower quartiles (black box) of ERC values of meiosis and mitosis proteins versus Shu complex members. Similarly, the violin curves depict the density of observed values. Both mitosis and meiosis groups were tested for their departure from the null (all genes) distribution. For these tests “***” indicates a P-value less than 0.001.
