Figure S9  The gonad migration defect in mir-83(n4638); mir-34(gk437) mutants is not movement dependent. The unc-54(e190) mutation paralyzes worms. The penetrance of the migration defect is not significantly different between mir-83(n4638); mir-34(gk437) mutants and unc-54(e190); mir-83(n4638); mir-34(gk437) mutants. Starved L1s were plated on HB101-seeded NGM plates, spent 16 hours at 20º, followed by four 15 minutes oscillations between 15º and 25º. *** p-value ≤ .005.
