Vol. 197 No. 2 June 2014

Cover photo: Kaleidoscope montage of *Drosophila* larval fat tissue expressing a chimeric MAP3K protein (anti-HA epitope tag in red, nuclei are shown in blue). The fat body organ is a major site of innate immune response to infection. In both fat body and epithelia, the MAP3K proteins, Tak1 and MLK, localize to different sites within the cell, which may contribute to their differential activation by stimuli. Artwork courtesy of Beth Stronach. See Stronach *et al.*, *Genetics* 197:497–513.

PERSPECTIVES

- 435–439 **Would Fred Sanger Get Funded Today?**
Fields, Stanley

REVIEW

- 441–450 **The Genetic Control of Apomixis: Asexual Seed Formation**
Hand, Melanie L. and Anna M. G. Koltunow
