Vol. 198 No. 3 November 2014

**Cover photo:** Male and female stalk-eyed flies, *Teleopsis dalmanni*, in copula. These southeast Asian flies not only exhibit dramatic sexual dimorphism, but some also carry sex chromosomes that show biased transmission. Flies from isolated populations readily mate, but exhibit male-hybrid sterility as a consequence of genomic factors associated with this genetic conflict. See Wilkinson *et al.* 198: 1167–1181.
