HIGHLIGHTED ARTICLE

1051–1060 Genotyping Informatics and Quality Control for 100,000 Subjects in the Genetic Epidemiology Research on Adult Health and Aging (GERA) Cohort

Cover photo: The image on the cover is a photographic montage of a diverse group of people overlaid with a micrograph of chromosomes with telomeres taken in the laboratory of Elizabeth Blackburn. This issue of the journal includes three papers that report the methods and results of a genome-wide association study of a diverse cohort of over 100,000 adults comprising the Genetic Epidemiology Research on Adult Health and Aging (GERA) cohort, part of the Kaiser Permanente Research Program on Genes, Environment, and Health in northern California. The three articles describe the genotyping and quality control methods, the population structure of the cohort, and the measurement of telomere lengths. See Kvale et al., Lapham et al., and Banda et al. in this issue. Images provided courtesy of Elizabeth Blackburn (chromosomes, telomeres) and Wernher Krutein (composite photographs of individuals), protovault.com. Final cover image created by Adam Boroian.
