These images show confocal Z-slices of the same gonad immunostained for PUF-11 (each slice in a different color) and DAPI (white). PUF-3 and PUF-11 RNA-binding proteins work in a combinatorial regulatory hub to promote self-renewal of *Caenorhabditis elegans* germline stem cells. Image courtesy of Kimberly A. Haupt. See Haupt *et al.*, pp 147–161.
