

Figure S4 Far11-HA in total cellular proteins prepared by trichloroacetic acid precipitation exists as a single band on Western blots. Total cellular proteins were prepared from the yeast strain SY4078 carrying a centromeric plasmid encoding *FAR11-HA* (pZL2762) using the NaOH- β mercaptoethanol-trichloroacetic acid method as described (YAFFE and SCHATZ 1984) and separated by SDS-PAGE. Far11-HA was detected by immunoblotting with the high affinity rat monoclonal anti-HA antibody 3F10 (Roche).
