

Figure S2 *kin-1* genetic mosaics with complex losses within the somatic gonadal cell lineages. Genetic-mosaic animals with complex losses of the *kin-1(+)* array in the somatic gonad (see Figure 1 in the main text) are described in more detail. Green characters represent the presence of the *kin-1(+)* array and red characters represent the absence of the *kin-1(+)* array. Uterine cells were not scored. One sterile genetic mosaic animal (star) resulted from multiple independent losses within both the Z1 and Z4 lineages. This animal is consistent with a requirement for *kin-1(+)* function in the gonadal sheath cells for meiotic maturation.
