

Figure S18. Number of overlapping 100 kb windows and true positive rate in the empirical tails of iHS for pairs of populations simulated under less recent selection. Strength of selection $s = 20\%$, time of selection equal to 144 generations ago. The empirical tail examined is shown above each column, and the x-axes indicate the value of F_{ST} simulated between Populations 1 and 2 (see Figure S12). Top row y-axis: number of overlapping 100 kb windows; bottom row y-axis: true positive rate. See caption for Figure S15.
