

Figure S3 Growth of WT, *sgs1-D664*Δ, and *sae2*Δ cells relatively unaffected by 40 Gy IR. WT, *sgs1-D664*Δ, *sae2*Δ, and *sae2*Δ *sgs1-D664*Δ cells were grown to early log-phase and five-fold serially diluted onto YPD medium. The treated plate was exposed to 40 Gy IR and incubated for 24-36 hours at 30°C.
