

Figure S2 Kinetics of recombination events. Sequencing of the YJB9929 population identified recombination on Chr4R between passage 380 and 411. Interrogation of Chr4R by PCR and sequencing in 24 individual colonies from passage 411 revealed that 23 of the 24 colonies contained the recombination event seen in the passage 411 population and the remaining colony retained the TLO configuration seen in passage 380.
