

Figure S1 Extended L1 arrest leads to the production of abnormally shaped embryos. Length (A) and width (B) are plotted for D1 control, D8 "normal" and D8 "abnormal embryos. Normal and abnormal were manually classified by eye. D1, D8 normal and D8 abnormal include 36, 75 and 11 embryos, respectively. Box and whiskers show minimum, 25%, median, 75%, and maximum with outliers as dots.
