

## Induced Feeding Quiescence

**Figure S1** Overexpression of IDA-1 does not rescue the defective LIN-3/EGF induced quiescence phenotype of *vav-1* mutants. Percentage of animals showing LIN-3/EGF induced feeding quiescence. 50-60 animals were analyzed for each genotype. Data are presented as mean  $\pm$  SEM and were analyzed by one-way ANOVA with Tukey post-test analysis (\*\*\*)  $p < 0.001$ ).
