

Figure S4

Figure S4. Sirtuin subcellular localization in response to TORC1 inhibition. (A-E) No tag control, and WT or *tco89Δ* cells expressing the 9xMyc epitope-tagged sirtuins were cultured to log phase, treated as indicated, and imaged by indirect immunofluorescence as described in the methods. Images are representative of at least three independent biological replicates, and are a subset of the quantification shown in Figure 6B and 6C.
