

FIGURE S1.—Replication of distal eQTL hotspots across tissues. Distal eQTL hotspots were determined by the high frequency of eQTLs at $\text{LOD} > 6$ detected at the same loci. The frequency of eQTLs at the same loci in adipose, brain, liver and muscle tissue is shown for chromosomes 1, 4, 6, 8, 9, 11, 13 and 17.
