

Figure S1 Effect of nitrogen and amino acid deprivation on Tec1 protein levels. Exponentially growing yeast strains RH2754 (Control), YHUM1376 (*sit4Δ*) and YHUM1341 (*rsp5Δ*) were incubated in SC medium containing ammonium sulfate (NH_4^+) and amino acids (aa), in SC medium lacking ammonium sulfate or in medium lacking both ammonium sulfate and amino acids. Relative Tec1 levels (Tec1 norm) were determined after 70 min. by immunoblot analysis.
