

Table S9 ANOVA results for model III fit with the constitutive exons as a covariate for 1,094 genes with constitutive exons and at least two alternative exons. The main effects of constitutive exon, alternative exon, time-point and alternative exon-by-time-point interactions are shown. Results are based on type III SS, significance threshold <0.2.

FDR level	Constitutive exon	Alternative exons	Time-Point	Alternative exon-by-time-point interaction
<0.05	1408	1031	29	56
<0.1	88	12	8	20
<0.2	120	8	27	24
>0.2	295	43	1030	994
